When to use Partial-DDD - Tactical

* **As a Developer**: Use Building Blocks

* Layered Architecture, Aggregate

* TDD

* When: Increasing conditional statements

* When: DB accessed everywhere, big test setup

* When: DB Locking issues

When not to use DDD

- Simple CRUD / REST application needs

- Not using an iterative process

- Poor access to Domain Experts

- Build and forget apps

CRUD => Active Record => Domain Model => DDD

- Davin Tryon, via stack overflow
